1 CADS Geotechnical DVD 2021

Thank you for upgrading to the latest version of the CADS Geotechnical DVD 2021.

These release notes summarise the enhancements and the corrections that have been made.

1.1 CADS Bearing Pile Designer

Corrections made:

1. The pile testing option was incorrectly reported in the printout. This has been fixed;
2. The selected design code was incorrectly reported in the printout. This has been fixed.

1.2 CADS Piled Wall Suite

Corrections made:

1. In some cases, an error occurred for the negative vertical effective stress when the water level was above the original soil level. This has now been fixed;
2. In some cases, for files created before version 6, an error occurred when the active slopes were defined in the analysis data rather than the construction sequence. This has now been fixed by resetting those slopes to zero when opened in the current version;
3. In some cases, soil Ciria classes were incorrectly displayed in the soils properties grid. This has now been corrected.

2 Post-installation notes

Once you have installed the CADS Geotechnical software, it must be authorised before it can be used. The procedure is the same for stand-alone and network installations. For network installations, you should ensure you have the necessary permissions to write to and create directories on your server drive before starting.

To start the software, select the 'Ground Engineering' icon from the Desktop or 'CADS' program group (Start->Programs) and then click on the module that you require. If the program is not authorised the licence manager will be invoked automatically, through which a licence can be requested.

At any time, a licence can be requested by pressing the "Licensing Wizard..." button and the application can be licensed by pressing the "Enter/Import Licence Codes..." button of the CADS Licence Manager.

For details please refer to the CADS Licence Manager help.

If you have any questions about this procedure, please contact our Technical Support Department who will be happy to help.
